

Why Good Employees do Bad Things

What is CWB?

Counterproductive Work behavior (CWB): intentional behavior that harms or intends to harm an organization and its members (Spector et al., 2005)

CWB is a family of behaviors . This typology graph provides an empitially - supported guideline for creating distinctions between behaviors (Robinson & Bennett, 1995).

Individuals who do one CWB tend to also commit others suggesting there is a general underlying tendency (Marcus et al.,. 2013)

3 Major Subdimensions:

- Interpersonal
 - anger-driven behaviors harming coworkers
- Organizational
 - rule-breaking to harm the company
- Production/ Withdrawal Deviance
 - disengagement and reduced effort in tasks

Dimensionality of CWB (Spector, Different CWBs have different predictors

- Emotional
 - reactive
 - impulsive
- Instrumental
 - planned
 - can be ongoing or repeated

What causes CWB?

Individual:

Personality Traits

- Low agreeableness
- low conscientiousness
- Anger
- Impulsivity/ low self-control

Personality contributesto a general deviance tendency (Marcus et al, 2013)

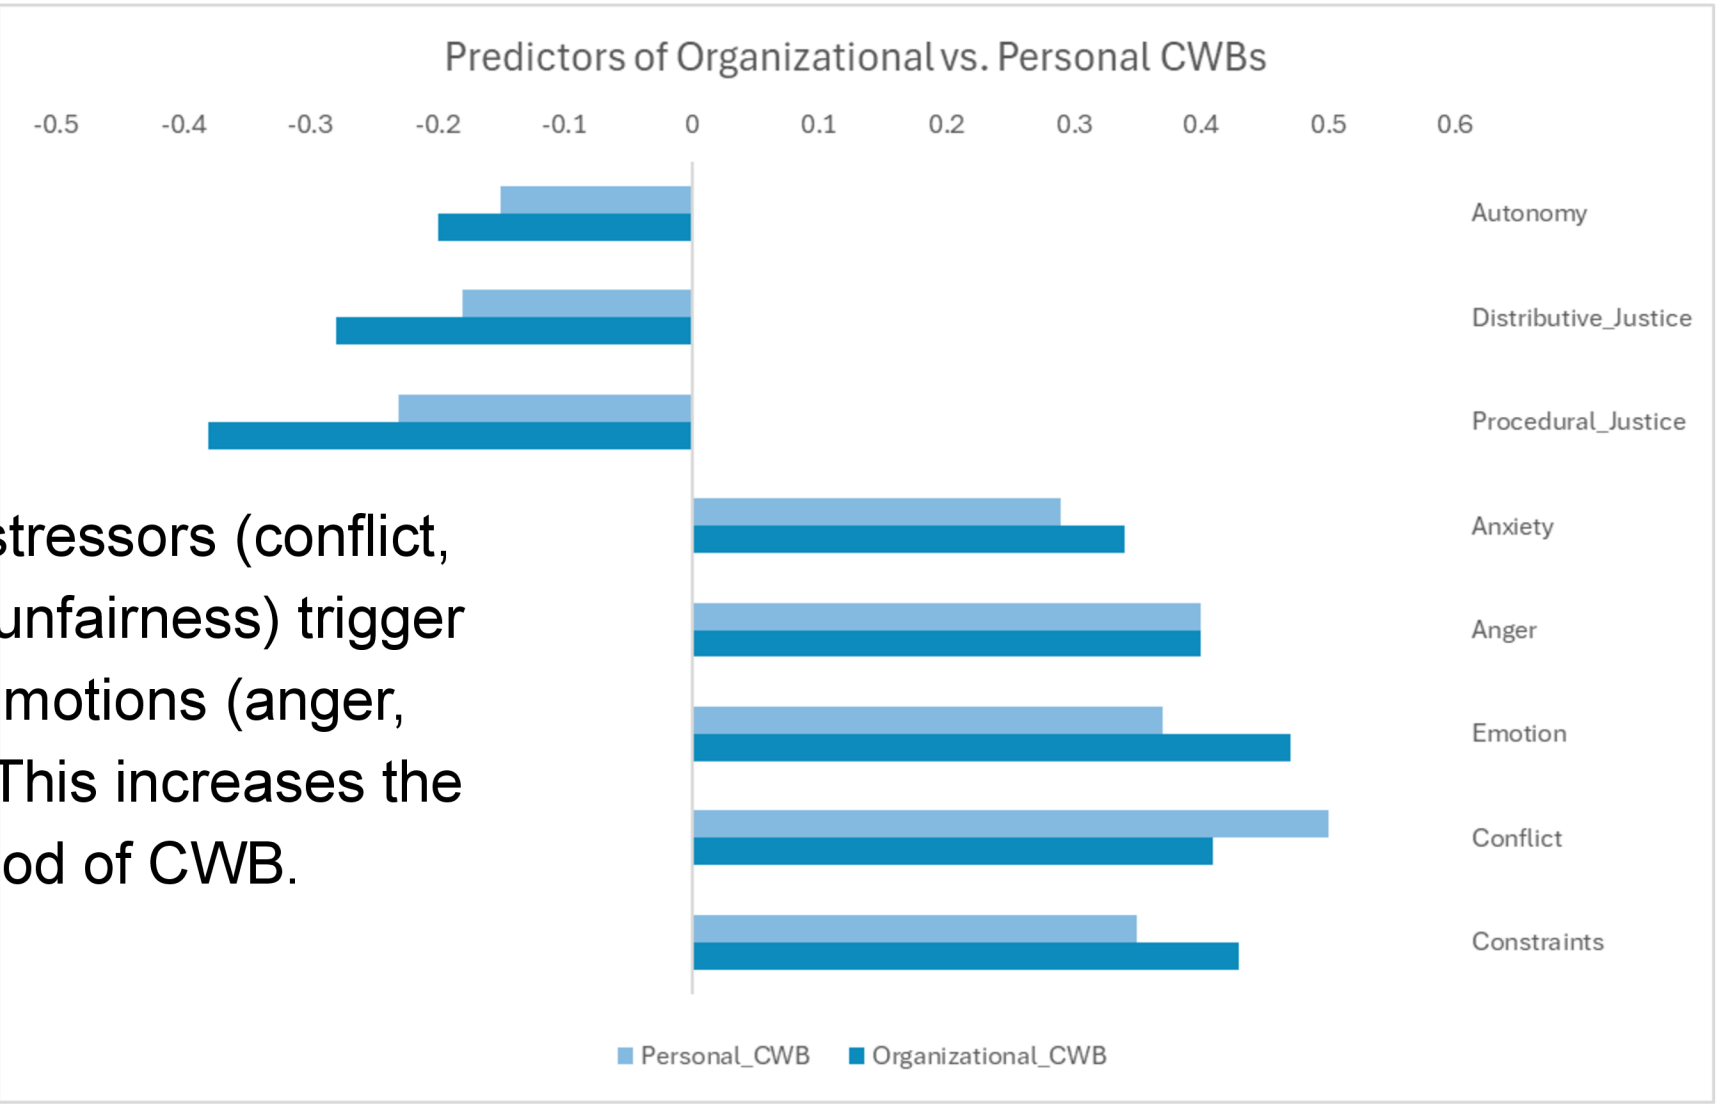

Bad climates amplify personality risks while supportive climates minimize trait-driven CWB (Tziner)

Stressor - Emotion Model:

Job Stressors	Job Stressors
• Role conflict/ ambiguity • Work overload • Interpersonal conflict • Organizational constraints/ lack of resources • Rigid Structures	• Procedural injustice • Distributive injustice • Interpersonal injustice • Informational injustice (Fox, Spector & Miles, 2001)

Stressors lead to negative emotions, esp. anger, which predict reactive CWB (Fox & , 2005)

Workplace stressors (conflict, constraints, unfairness) trigger negative emotions (anger, frustration). This increases the likelihood of CWB.

How can we limit CWB?

Individual	Job	Organizational
• Emotion regulation training (Fox, Spector, Miles, 2001) • Stress Management • Conflict Management • Ethics Training • Purposeful Employee Selection	• Clarify roles (reduce ambiguity/conflict) • Balance workload • Address interpersonal conflicts (Fox & Spector, 1999) immediately • Increased autonomy	• Improve procedural, distributive, interpersonal & informational justice (Akremi, 2010) • Repair trust if breaches occur • Strengthen ethical climate • Set strong anti-CWB norms (Marcus et al., 2013)

What can leaders do?

- Be supportive
 - Buffers against stress (Tziner et al., 2010)
- Intervene early when you notice conflict
 - Interpersonal conflict is a strong predictor of CWB (Fox & Spector, 1999)
- Be fair and transparent (Akremi, 2010)
 - Ensure strong informational justice
 - Maintain procedural and distributive justice

Key Insights:

- Minimize emotional triggers (Stressor-Emotional Model)
- Having a fair system deters CWBs
- Climate can moderate personality traits that lead to CWB
 - You can prevent trait-driven CWBs
- Target conflict and job constraints first
- Multi-level interventions (individual, job, & organization) outperform single interventions.
